

Aviation Training Center ATO (further "ATC") is a part of The State School of Higher Education in Chelm (Poland). ATC is an organizational school unit whose primary purpose is students' aviation training of the airplane and helicopter pilotage. The license range includes PPL, CPL(A), CPL(H), MEP(L) and IR(A).

ATC is operating its own airfield (ICAO code: EPCD). 18 months ago we have decided to upgrade existing lighting system due to its poor technical condition. We required ICAO compliant equipment in order to secure safety of night rating training.

We have chosen Solutions4GA to inspect our existing lighting infrastructure. Solutions4GA's engineers have carefully analyzed our lighting and offered us autonomous and remotely activated lighting system. We decided to invest in Solutions4GA's system. The main reasons why we have chosen the system were as stated below:

- Autonomous lighting significantly decreases cost of airfield lighting installation. There is no need to invest and maintain electrical infrastructure (cables, transformers, etc.);
- Installation of airfield lighting takes only 45-60 minutes so we can use the lights whenever we need them;
- Lights can be easily demounted and stored in hangar when they are not in operations
- System offers remote activation by the air-band radio

Our practical experience with Solutions4GA's lighting has proven its reliability and low maintenance. Our instructors and student pilots are satisfied with the visibility range provided by the lights.

We would highly recommend this product to other Solutions4GA customers.

Sincerely,

Łukasz Puzio  
Head of Aviation Training Center ATO  
PL/ATO-5
