Airport sealing specialist
Quality and efficiency via technology

In-depth airport experience and knowledge

“ CSS has the most advanced and efficient equipment on the market as well as a specially trained crew with great experience in planning and working under the specific conditions at an airport, including safety regulations and clearings.

In addition, CSS offers a flexible production at specific times convenient to the airports for the sealing project.

CSS has made large scale projects in airports on Iceland (photos from there), Copenhagen, Aalborg and Skrydstrup.

Precision cutting machine connected to a water filtering system, that reduces water consumption from 20.000 liter per day to just 1.000 liter.

Semi-automatised production process reducing time and labour costs, increasing quality.

Technology and knowhow is the advantage of the airport

Complete Sealing Solutions is leading in technology and knowledge on specialized joint sealing business especially for airports.

Knowledge, technique and logistics must form a synthesis to a much higher degree than with the general joint sealing task.

CSS has designed and developed several own machines and techniques that increases speed and quality in the complex processes making an airport.

We work closely with the leading joint filler manufacturers and we have access to the latest developments within advanced, well-tried and tested joint filler.

CSS is taking care of the entire process from cutting, phasing, backstop, primer and finally the actual sealing process.

Complete work from A-Z based on experience, technology and knowhow.
